ERP Solution

ENTERPRISE RESOURCE PLANNING (ERP)

# Overview

**QMANAGE®** system which was developed by MARMARA Company to manage all the resources of the whole enterprise. Right from employee payments to a single screw coming into the enterprise, everything can be managed & tracked by using **QMANAGE®** System. **QMANAGE®** is a cross-functional software that supports all the business processes within the organization.

In an organization, **QMANAGE®** helps to manage business processes of various departments & functions through the centralized application. We can make all the major decisions by screening the information provided by **QMANAGE®** . Depending on organizations' needs required components are integrated & a customized **QMANAGE®** system is formed.

# QMANAGE® Modules

All the below-mentioned modules can be found in **QMANAGE®**:

- Purchase Management
- Sales Management
- Inventory Management
- Finance & Accounting
- Budgeting Management
- Manufacturing Management

# We Help ...

The modular design of **QMANAGE®** allows it to meet the shifting needs of a business and is a big reason this software has become ubiquitous. An organization can purchase only the modules relevant to its business model, operations and key challenges. It can then add **QMANAGE®** modules to address new needs or challenges as the organization evolves.

The beauty of modular **QMANAGE®** software is that a company can add this functionality while keeping the same foundation in place. There is no need to implement a new ERP system—a lengthy process—when requirements change, as long as the company chooses an established ERP provider with a wide selection of modules.

# QMANAGE® is Cost-effective

For example, one study finds that on average an **QMANAGE®** can reduce overall operational costs by 23% and administrative costs by 22%. That's a significant saving over time. And while operational savings may be a driving factor to explore ERP adoption, quality ERP programs can do more than just save money.

95% of businesses say they have major operational improvements after implementing an **QMANAGE®**. The improvements include reducing process times, increasing collaboration and centralizing data and more.

- RPs cut operational costs and improve efficiencies
- Improved communication and data exchange with better collaboration
- Centralized business functions and decreased process times
- Less IT costs and reduced labor burdens

# Purchase Management

**QMANAGE®** purchase management module helps you maintain masters for various suppliers and their contacts, track purchases, get a complete purchase rate history etc. It systematically records all the details pertaining to various suppliers, purchase orders, purchase requests, quality checks, purchase returns and much more. It enables you to evaluate a supplier based on delivery time, quality of material and cost of procurement.

Linking accounts and inventory with the purchase process, it enables a business optimize its procurement processes and patterns, thereby improve quality and reduce cost/time of procurement and gain a distinct competitive edge. Our Purchase Management Module integrated with related functional processes keeps a constant check on the stock levels and generates timely purchase orders for cost effective inventory replenishment.

# Sales Management

**QMANAGE®** Sales module implements functions of order placements, order scheduling, shipping and invoicing. Sales and distribution management takes the responsibility of making sales and manage the distribution chain in order to make profit.

The main aim of any distribution and manufacturing business is to optimize the sales efficiency and prices along its supply chain. Processing customer orders is the second critical function.

Maintaining continuity in market supplies is extremely important for a business, **QMANAGE®** ERP sales module enable your sales department gain access to critical information at the right time thereby helping them plan efficiently on the basis of demand, ensuring timely deliveries accompanied with customer satisfaction.

# Sales Management

Sales module implements functions of order placements, order scheduling, shipping and invoicing. This includes the process of making Sales quotation, Sales order, Delivery note, Sales invoice, Debit note & their respective masters. Sales order can be made against sales quotation & also can be made manually. There is a functionality of double authorization or two level authorizations in sales order along with the functionality of amendment. Amendment logs are maintained according to the rates and quantity in respective reports which are easily traceable.

- Defines additional details and terms & conditions related to the sales order.
- shipping goods to different address against a single sales order.
- Sales module validates dispatch of goods against any order in case of unavailability of stocks.
- Creation of Supplementary sales invoice in case of any rate change after authorization of sales invoice.
- Making delivery note without a sales order and respective invoices can be made accordingly.

# Inventory Management

Reduced Holding Cost. Optimized Inventory Management!

Store is an essential part of any manufacturing organization. The objective of a store is to smoothly and economically provide the right materials at the right time, and in the right condition. Keeping a close eye on the level of inventory requirements is the key to smooth and uninterrupted functioning of any production department. Sound functioning of a production department improves the overall working of other vital interrelated departments.

Businesses strive to optimize their level of inventory management, but a very few really succeed in doing so. Planning Inventory levels require planning a lot more than one would think. Systematic and accurate recording of inventory movement at different stages result in better inventory tracking.

**QMANAGE®** store module helps you meet your supply chain goals by achieving perfect order fulfillment and reduced operational (holding) cost. By generating detailed reports on various essential aspects of store management, it offers visibility into critical inventory levels.

# Finance & Accounting

**QMANAGE®** Finance & Accounting module assisting businesses to manage the primary accounting and financial issues. It keeps track of basic accounting functions, including the general ledger and balance sheet, as well as managing financial issues such as asset management, accounts payable, accounts receivable, cash management, etc. This module also takes on the role of profitability analysis and revenue management.

**QMANAGE®** can integrate all processes in the whole company into a firm and logical system running on a central database. Departments in your enterprise are allowed to access other ones. The data in the finance module is shared with some core essential business activities, including inventory management, marketing, sales, purchasing and others.

If they have a financial impact, the finance and accounting module in **QMANAGE®** will be able to collect and record it. As a result, accounting and finance are assured to be accurate, assists you in meeting financial requirements, and allows you to produce numerous financial reports.

# Budgeting Management
